## Contents

|     |                                                                        |   |
|-----|------------------------------------------------------------------------|---|
| I   | Readings & Literature Review                                           | 2 |
| 1   | Causally Interpretable Meta-Analysis Combining AD and IPD              | 2 |
| 2   | Comparing Methods for Estimating PSTE in IPD Meta-Analysis             | 2 |
| 3   | IPD Meta-Analysis vs AD Meta-Analysis                                  | 2 |
| 4   | KM-GPT                                                                 | 2 |
| 5   | Meta-Analysis of Reconstructed Survival Data (MARS)                    | 2 |
| 6   | Transportable Inference Using Summary Statistics Under Covariate Shift | 2 |
| II  | Project Directions                                                     | 2 |
| 7   | Single-Covariate Reconstruction and Extremal Inference                 | 2 |
| 8   | Joint Covariate Reconstruction                                         | 2 |
| III | Notes                                                                  | 2 |
| 9   | Meta-Analysis Review                                                   | 2 |
| 10  | Survival Analysis                                                      | 2 |
| 11  | Min-Max Methods                                                        | 2 |
| 12  | STAT-LM and Evaluation of AI-Statistical Models                        | 2 |

## Part I

# Readings & Literature Review

1. Causally Interpretable Meta-Analysis Combining AD and IPD
2. Comparing Methods for Estimating PSTE in IPD Meta-Analysis
3. IPD Meta-Analysis vs AD Meta-Analysis
4. KM-GPT
5. Meta-Analysis of Reconstructed Survival Data (MARS)
6. Transportable Inference Using Summary Statistics Under Covariate Shift

## Part II

# Project Directions

7. Single-Covariate Reconstruction and Extremal Inference
8. Joint Covariate Reconstruction

## Part III

# Notes

9. Meta-Analysis Review
10. Survival Analysis
11. Min-Max Methods
12. STAT-LM and Evaluation of AI-Statistical Models
